Data

The data on noise (geluidsbelasting) of road-, rail- and air traffic were provided by Planbureau voor de Leefomgeving (PBL; www.pbl.nl). The original reason to monitor noise over time was policy of the government to ensure a livable and safe environment and to improve the quality of the environment and to protect residents against noise and external security risks.

The PBL modeled daily mean noise of road-, rail- and air traffic in the Netherlands in 2000, 2004, 2005, 2007 and 2008 by using the Empara Noisetool with a resolution of 25 by 25 meters. For their model calculations they used data on road traffic (data from Goudappel Coffeng, Rijkswaterstaat en andere overheden), rail traffic (data from Prorail) and air traffic (modeled data from Netherlands Aerospace Center (Nationale Lucht- en Ruimtevaartlaboratorium). Noise is measured in Lden (Level day-evening-night) and is expressed in decibels (dB (A)). The measure Lden accounts for the fact that noise in the evening and the night are more annoying than during the day. The average noise levels during the day (7-19h), the evening (19-23h) and the night (23-7h) are calculated first and the levels of noise in the evening and the night are increased with 5 and 10 dB (A) respectively. Subsequently, the daily mean noise was calculated by dividing the noise levels during day, evening and night by 3.

The modeling of noise data accounts for several factors, including road traffic intensity (cars vs. trucks), pavement type, sound barriers, timetables of rail traffic, rail type, train equipment, number of plains per runway, plain size, type and age of plains, timetables of plains, flight paths (horizontal as well as vertical).

The noise data was coupled to all addresses that were included in the Basisregistratie Adressen en Gebouwen (BAG) in June 2015 by using GeoDMS software. The GeoDMS software was provided by Object Vision BV (Object Vision BV, Amsterdam, the Netherlands; <http://www.objectvision.nl/geodms/introduction>).

Variables

Table 1 provides an overview of noise variables regarding road-, rail, and air traffic that are available.

Variable name	Description
PC6_Huisnummer	Address (6 digits zip code and house number)
PC6	6-digits zip code
PC6_with_space	6-digits zip code with space
PC4	4 -digits zip code
PC_letters	PC letters
Huisnummer	House number
Mean_Geluidsbelasting_WegRailLucht_2000	Etmaalgemiddelde geluidsbelasting van weg- rail en luchtverkeer in dB(A) in 2000
Mean_Geluidsbelasting_WegRailLucht_2004	Etmaalgemiddelde geluidsbelasting van weg- rail en luchtverkeer in dB(A) in 2004
Mean_Geluidsbelasting_WegRailLucht_2005	Etmaalgemiddelde geluidsbelasting van weg- rail en luchtverkeer in dB(A) in 2005
Mean_Geluidsbelasting_WegRailLucht_2007	Etmaalgemiddelde geluidsbelasting van weg- rail en luchtverkeer in dB(A) in 2007
Mean_Geluidsbelasting_WegRailLucht_2008	Etmaalgemiddelde geluidsbelasting van weg- rail en luchtverkeer in dB(A) in 2008

Source
