### Data

These data include information on the population and households in 4-digits post code areas from 1998 to 2014. These data describes the population in terms of sex and age. In addition, the total number of immigrants per zip code is stratified into Western immigrants and non-Western immigrants. Furthermore, the number of private households is described in terms of composition. More information on these data (e.g. list of terms) is available in the raw Excel data files (see tab 'Omschrijving').
